Hiring Team

CodeLeap Solutions
Hyderabad, India

Dear Hiring Team,

I'm writing to apply for the UI/UX Designer position at CodeLeap Solutions. I'm a UI/UX Designer and Frontend Developer with 3+ years of experience designing and building digital products end to end, and I think my background lines up closely with what you're looking for.

A few things from my recent work that feel directly relevant to this role:

Design systems & style guides: For a B2B SaaS hiring platform (Jaldihire), I built the complete design system — color tokens, button library, form states, alert variants, data tables — before designing a single product screen, since multiple panels and developers were working in parallel and needed a shared foundation. I've done the same for an e-commerce/luxury interiors brand and an internal HR system.

Web + mobile, in one project: For VOYD Interiors, I designed the full customer-facing website and shopping experience alongside a mobile-first field inspection tool (Quality Checker) built around a progressive-disclosure UX — so I'm comfortable moving between web and mobile design within the same product.

Design-to-development collaboration: I don't just hand off designs — I also build the frontend myself (HTML, CSS, JavaScript, React), so I design with implementation in mind and can speak the same language as engineers I work alongside.

Client-facing work: Several of my case studies were freelance/client engagements where I presented design concepts directly to stakeholders and iterated based on their feedback, alongside a self-initiated internal HRMS project at my current company that I proposed, designed, and shipped (recognized with a Best Employee award in 2024).

I'd welcome the chance to talk more about how I could contribute to CodeLeap's client projects. Thank you for considering my application — I look forward to hearing from you.

Sincerely,

Ajaykumar Vodla
